

At a Glance... Herd Status: Beef and Bull

This report allows you to keep track of all the beef animals born on your farm, reported separately from the dairy youngstock. With it becoming increasingly important to record and keep track off all your animals this report allows you to keep a complete list of all your beef animals, both for your own management purposes and to help meet legislation requirements.

For each animal the identities, sex, date of birth and parentage details are displayed. There is also plenty of space on the right hand side of the report for you to record management information such as movements, drug treatments and weights.

Calves will appear on the beef report if the following information is recorded for them:

- A sire with a recognised beef breed
- OR
- A usage of Beef
- OR
- A sex of B (ie a bull calf)

Calves will only appear on the dairy youngstock report if:

- The breed of their sire is dairy or dual purpose
- AND
- They have a sex of D (ie a heifer calf)
- AND
- They do not have a usage of Beef

To make sure that you calves appear on the correct report it is important they are recorded with the correct sire, the correct sex and the correct usage. Your recorder will know how to record all these.

KEY FEATURES: Herd Status: Beef and Bull

To ensure that your beef animals appear on the Beef and Bull report make sure the following information is recorded for them:

1. a line number
2. the correct sire
3. a usage of Beef

This shows the age range of animals that will appear on the report. The default is 0 – 30 months of age. This can be changed to a lower or higher age depending on how long you keep your beef animals.

Dairy bulls ie those calves with a dairy breed or dual purpose breed will appear in this section.

The breed of the calf is shown here.

This area can be used by you to record additional information about the animal.

If the dam is or has been in the herd her line number is given. An 'IN' following the line number indicates that she is still in the herd. A 'D/S' shows that she has now left the herd.

Details of the calf's parents are given to help complete the animal records.
